

Information Power Advantage

Charting a Revolutionary Course to:

Forge Information Dominance

Lead Evolution of the Warfighter

Open Portals to Innovation

Guiding Principles:

We are the Navy's community of Information Warriors with expertise in information, command and control, and space systems.

We own the Naval Network, the foundation of information dominance and successful execution of Naval, joint, allied and coalition operations.

We plan, acquire, operate, maintain and secure the Naval Network and the systems that support Navy's operational and business processes to ensure they are reliable, available, survivable, and secure.

We evaluate and integrate leading edge technologies, innovative concepts, and essential information elements to ensure a warfighting advantage.

We will aggressively foster development and maturation of the skills needed to conduct network-centric operations, both afloat and ashore.

IP Career Path

The Information Professional (IP) restricted line community relies on lateral accessions to grow the Navy's experts in communications, computers, networks, surveillance and space systems. IP officers serve in challenging billets of ever increasing scope and responsibility both afloat and ashore. IPs are assigned to sea billets on Battle Group Staffs and Ships at each grade. Shore tours include C4I/Space/Surveillance billets on major navy and joint staffs as well as command of key communication and surveillance facilities around the globe.

Selection for Navy IP

- Most IP Officers enter the community after lateral accession as LTJGs, LTs and junior LCDRs.
- The majority of officers selected for the IP community will be warfare qualified and have strong operational backgrounds.
- New IPs can expect early assignment to a technical postgraduate degree program in an IP core competency area (C4I, Space, Info Sys, Comp Sci, IW).
